PROJECTS

CSH Packet

github.com/ComputerScienceHouse/packet

Packet is a web application used by Computer Science House to replace a paper signature system used when new members apply. The system keeps track of signatures, allows people to sign packets and calculates progress. Built using Python and Flask, with SQLAlchemy, FreeIPA LDAP and behind OIDC authentication.

AWS Wrapper

github.com/SquashProjectTwo/AWS-Wrapper

Created at Brickhack4, a web application that created a new UI interface for AWS, specifically EC2 by using Boto3 to immitate all the functions provided by EC2 in their current web interface. Won best use of AWS at the event.

Contrb

github.com/Contrb

A website built to display coding projects and open source contributions in a visually appealing manor. Built with a React frontend along with a Nodejs and GraphQL backend. The application utilizes GitHub Oauth, GitHub v4 API, with many more integrations planned.

wasp

github.com/devinmatte/wasp

A command line utility for generating and managing web configuration files. Including the manifest.json, bower.json, package.json and composer.json. Built in Python, and packaged for Linux. Currently managing as a multiple contributor project.
